

### DESCRIPTION

**CFL-450** is a mid to high range temperature fluid loss control additive for use in oilwell cement slurries. **CFL-450** has a mildly retarding effect which will slightly reduce the retarder requirement in slurries. As with all fluid loss additives the fluid loss control properties are improved when the product is used in conjunction with dispersants and **CFL-450** is compatible with all Aubin dispersants and all classes of Portland cement.

**CFL-450** is salt tolerant and so can be used in fresh and seawater slurries.

**CFL-450** can be used up to 400°F.

### APPLICATION

The product can be dry blended with cement or added to the mix water. The usual concentration range is between 0.25 and 2.0% BWOC.

### PHYSICAL PROPERTIES

Physical Appearance	White granular powder
Odour	None
Specific Gravity	approx 1.6g/cc
Solubility	Soluble in water

### PACKAGING

Supplied in 25kg sacks

### ADDITIONAL INFORMATION

None
