

DESCRIPTION

SDA-04 is a waxy, off-white material used as a temporary blocking or diverting agent during well treating operations. This product is an equivalent to the well known 'Unibeads'. **SDA-04** temporarily blocks the more permeable zones first and allows the treating fluid to be more evenly distributed over the whole interval of interest.

APPLICATION

SDA-04 can be used at bottom hole temperatures of 80 to 180°F. For wells with higher temperatures, cooling can be effected by circulating fluids around prior to introducing the diverting agent into the well.

PHYSICAL PROPERTIES

| | |
|-----------------|---|
| Appearance | Off-white, buttons |
| S G | 0.93 |
| Congeaing point | 185°F |
| Melting point | 193°F, approx |
| Sizes | Beads 2½ - 4 mesh, Nominal Prill 16-40 Mesh, Nominal |
| Solubility | Oil soluble |

PACKAGING

Supplied in standard 25kg sacks.
