

### DESCRIPTION

**SDA-06** is a waxy, off-white material used as a temporary blocking or diverting agent during well treating operations. This product is an equivalent to the well known 'Unibeads'. **SDA-04** temporarily blocks the more permeable zones first and allows the treating fluid to be more evenly distributed over the whole interval of interest.

### APPLICATION

**SDA-06** can be used at bottom hole temperatures up to 200°F or so but for wells with higher temperatures, cooling can be effected by circulating fluids around prior to introducing the diverting agent into the well.

### PHYSICAL PROPERTIES

Appearance	Off-white, beads or prill
S G	0.9 approx
Congeaing point	95-100°C* (203-212°F), ASTM D3954
Sizes	Beads 2½ - 4 mesh, Nominal Prill 16-40 Mesh, Nominal
Solubility	Oil soluble

\* specification values.

### PACKAGING

Supplied in standard 25kg sacks.

### ADDITIONAL INFORMATION

None
