

DESCRIPTION

SS-19 non-emulsifier is an oil-based, water dispersible, strongly anionic surfactant. Although primarily used in oil based fluids such as oil frac fluids or diesel preflushes, **SS-19** non-emulsifier is occasionally used as an acid non-emulsifier.

APPLICATION

Loading levels range from 0.1% to 1.0% or higher depending on the severity of acid emulsion problems encountered. Normally **SS-19** is recommended for use in acid only if other products fail to perform well. It is useful in batch treatment of formation water or emulsion blocks. **SS-19** treatments generally range from 2 to 40 barrels of carrier (formation oil, water, diesel, or kerosene may be used) containing from 0.25% to 5% **SS-19** non-emulsifier.

PHYSICAL PROPERTIES

S G at 16°C	1.04
Flash Point, SFCC	36°C
Pour Point	-40°C
Viscosity at 16°C,SUS	320
Solubility, 1% in water	Dispersible
Solubility, 1% in 15% HCl	Somewhat dispersible
Solubility, 1% in Kerosene	Somewhat dispersible
Ionic charge	Anionic
pH	7.3

PACKAGING

Supplied in 200L drums or 1000L IBC

ADDITIONAL INFORMATION

None
