

DESCRIPTION

SS-22 anti-sludge agent and non-emulsifier is a good general product for a wide variety of crudes, including asphaltic oils.

SS-22 is a blend of aryl sulphates, fatty quaternary ammonium compounds, oxyalkylated phenols and derivatives. The solvents are aromatic hydrocarbons, alcohols and water.

APPLICATION

SS-22 will water-wet both sandstone and carbonates. Due to its very good detergency, **SS-22** will slightly diminish the performance of acid corrosion inhibitors. However, this can be overcome by increasing the corrosion inhibitor by 1 - 2 gpt over the normal loading level.

For sludge prevention, up to 1% **SS-22** may be required and in some cases extra non-emulsifier may also be needed for emulsion prevention.

PHYSICAL PROPERTIES

S.G. at 16°C	0.97-0.99
Flash point	Min. 15°C (PMCC)
Pour point	Less than -12°C
Viscosity at 38°C	Approx. 10 cSt
Ionic nature	Cationic + Nonionic
pH	Approx. 6.5

PACKAGING

Supplied in 200L UN standard steel drums

ADDITIONAL INFORMATION

None
